Academic Program Description Form

University Name: Al Nahrain University Faculty/Institute: College of Science Scientific Department: Physics Academic or Professional Program Name: B.Sc in Physics Final Certificate Name: B.Sc Academic System: Semester Description Preparation Date: 2024–2025 File Completion Date: 2025/3/25

Signature Sacel N - M

Head of Department Name: Prof Dr Saad Naji Abood Date: 2025/4/10 Signature Scientific Associate Name Manag Advan Salah Date: 10/4/2025

Department of Quality Assurance and University Performance

Director of the Quality Assurance and University Performance Department: Date: 10.04. 2025

Signature:

1. Program Vision

The student's ability to understand and apply a variety of physical, and acquire the ability to explain and understand many of the physical processes.

2. Program Mission

Qualifying students practically and scientifically through an intensive scientific curriculum of teaching and learning methods and preparing the student in an academic way that is compatible with the necessities of scientific development. Preparing distinguished students in the field of scientific research who hold graduate studies.

3. Program Objectives

Increasing the efficiency of students and raising their level of knowledge so that they are qualified to work in various state departments so that they can be effective and distinguished elements in their fields of work and scientific research.

4. Program Accreditation

Does the program have program accreditation? And from which agency?

From the Association of Arab Universities

5. Other external influences

Is there a sponsor for the program?

Ministry of Higher Education and Scientific Research

8.Expected learning	outcomes of the program						
Knowledge							
Learning Outcomes 1	The student acquires the ability to explain and understand many of						
	the biological processes in primary and graduate studies that serve						
the labor market and scientific research.							
Skills							
Learning Outcomes 2	Preparing students who are scientifically empowered in the field of						
	specialization and the labor market.						
Learning Outcomes 3	Identifying the most important advanced scientific and research						
	materials that serve the fields of communications and modern						
	technology.						
Ethics							
Learning Outcomes 4	Ability to apply principles of physics.						
Learning Outcomes 5	The ability to solve scientific problems and find possible alternatives						
	to those solutions.						

9. Teaching and Learning Strategies

- 1. Solve various problems in different physics applications.
- 2. Giving homework to increase students' ability in problem–solving techniques.
- 3. Promote quick student response by asking conceptual questions during class.
- 4. Encouraging students in strategies to solve examples in class.
- 5. Encouraging students to publish research in graduate studies.

6. Encouraging students to use modern, advanced applications in the field of specialization.

10. Evaluation methods

- 1. Seminar.
- 2. Oral exams.

- 3. Quizzes.
- 4. Direct questions.
- 5. Homework.
- 6. Reports

Professional Development

Mentoring new faculty members

Assess teaching techniques and give the students surveys about those techniques.

Professional development of faculty members

Involve the new staff in teaching process and encourage them to develop the lecture with the supervision of the main lecturer.

12. Acceptance Criterion

(Setting regulations related to enrollment in the college or institute, whether central admission or others)

13. The most important sources of information about the program

دليل اتحاد الجامعات العربية "ضمان الجودة والاعتماد للبرامج الاكاديمية في كليات الجامعات العربية

الامانه العام /عمان/الاردن/2022

14. Program Development Plan

Involve more high level books and upgrade the lectures each year.

Materials Physics

2. Course Code:

3. Semester / Year:

First/ 2024

4. Description Preparation Date:

21/10/2024

5. Available Attendance Forms:

Physical attendance

6. Number of Credit Hours (Total) / Number of Units (Total)

2 hours weekly (30 total)/ 2 units

7. Course administrator's name (mention all, if more than one name) Name: Assist. Prof. Dr. Sadeem Abbas Fadhil Email: sadeemfadhil@yahoo.com

8. Course Objectives

• Understanding Physical Properties: Enabling Course Objectives students to understand the physical properties of different materials, such as density, hardness, and elasticity. • Applying Theoretical Concepts: Connecting theoretical concepts in physics to practical applications in everyday life and industry. • **Developing Analytical Skills**: Enhancing analytical and critical thinking skills through the study of material behavior under various conditions. • Encouraging Innovation: Inspiring students to innovate in the design and application of materials, supporting research and development in fields like engineering and materials science. • Understanding Chemical and Physical Changes: Studying how changes in environmental conditions affect the properties of materials.

• Interacting with Technology: Enhancing students' understanding of how modern technology is used in the study and application of materials science.

9. Tea	aching a	nd Learning Strateg	jies			
Strategy		• Lectures and Interactive Discussions: Use lectures to introduce key concepts, followed by discussions to encourage student engagement and clarify doubts.				
		•	ze real-world applications and lustry, engineering, and techn		ow materials	
			ts: Encourage collaborative learning through group projects that focus on ng new materials, fostering teamwork and problem-solving skills.			
			deling: Use computer simula navior under different condition	-	ex concepts	
			Assign readings or video lect r discussions, problem-solvin			
			Industry Visits : Invite profe to relevant industries to provid		als science	
• Problem-Based Learning : Present students with real and encourage them to propose solutions based on their				-		
		• Peer Teaching : Allow students to teach certain topics to their peers, reinforcing their own understanding and enhancing communication skills.				
			dback : Use varied assessments ns, to gauge understanding an

TEMPLATE FOR COURSE SPECIFICATION

HIGHER EDUCATION PERFORMANCE REVIEW: PROGRAMME REVIEW

COURSE SPECIFICATION

This Course Specification provides a concise summary of the main features of the course and the learning outcomes that a typical student might reasonably be expected to achieve and demonstrate if he/she takes full advantage of the learning opportunities that are provided. It should be cross-referenced with the programme specification.

1. Teaching Institution	Dr. Suha Mousa Alawsi Working in lab 1-Ruaa Tahseen 2-Ghufran Mohammed 3-Zena mowafaq			
	Alnahrain university /college of Science /physics			
3. Course title/code	Geomatrical optics			
4. Modes of Attendance offered				
5. Semester/Year	FIRST /2024-2025			
6. Number of hours tuition (total)	9 h			
7. Date of production/revision of this specification	10/10/2024			
8. Aims of the Course				
 Teaching the student the basics of optics. Teaching the student how to use the practical experiences of optics and linking them to the theoretical side 				

9. Learning Outcomes, Teaching ,Learning and Assessment Methode

A-Cognitive goals.

A1- Enable students to know the most important Arab and foreign scientists in Optics

A2- Enable students to understand how to use some visual effects such as interference and polarization.

A 3- Enable students to analyze the resulting images.

A4- Enable the student to simulate some physical systems such as the eye, telescopes, cameras and communications

B. The skills goals special to the course.

B1 - Practical skills

B2 - Reminding and Analyzing Skills

B3 - Use and development skills.

Teaching and Learning Methods

-Discussing the topics of the curriculum book and the auxiliary references -Theoretical lectures including problem solving and discussion of homework -Asking students a set of thinking questions during the lectures for specific topics. -Giving students homework that requires finding self-solutions

Assessment methods

-daily tests -Monthly exams -Homework and student interaction in discussion sessions - Making scientific reports for the lesson topics C. Affective and value goals C1 - Enable students to write scientific reports in various scientific fields.

C2 - Enable students to simulate physical systems by finding appropriate solutions to the problems that appear in these systems.

C3- Enabling students to understand and analyze the results with a view to benefiting from it in any field of scientific research

D. General and rehabilitative transferred skills(other skills relevant to employability and personal development)

- Follow up on scientific development by communicating with international universities via the Internet

-Participation in scientific conferences inside and outside the country

- Participation in workshops and scientific symposia inside and outside the country

7. Course administrator's name (mention all, if more than one name) Name: Dr. Iman A. Hussain Email: iman a. hussain@nahrainuniv.edu.iq

8. Course Objectives

Course Objectives	1-To study the techniques of complex variable and functions together
	with their derivatives, contour integration and transformations.
	2-To study complex power series, classification of singularities.
	3-To study calculus of residues and its applications the evaluation of integ
	and other concepts and properties

9. Teaching and Learning Strategies

Strategy Lectures, Homework, some activities in the class, Electronic reference					

10. Course Structure

Week Hours		Required Learning	Unit or subject	Learning	Evaluation
		Outcomes	name	method	method
1-3	12	Field of complex numbers	Chapter 1	lectures	
4-8	20	Analytic Functions	Chapter 2	lectures	
9-1	1 12	Log function, Elemen Functions	Chapter 3	lectures	
12-	1: 16	Integral, series, series	Chapter 4,5	lectures	

11. Course Evaluation						
Distributing the score out of 100 according to the tasks assigned to the student such as daily preparation, daily oral, monthly, or written exams, reports etc						
12. Learning and Teaching Resources						
Required textbooks (curricular books, if any)	1-Complex variables and applications Ruel v. Churchill2-Complex analysis Theodore

			8. Course Objectives						
Course		• The student wil	l have additional knowledge of t	the first semes	ter's quantum				
 Objectives mechanics curriculum. Develop the student's understanding of the basic concepts of quantum mechanics and some of its applications, acquired in the first semester. The student will have the ability to understand the applications of quantum mechanics and the skills to solve problems related to those applications for the second semester's topics. Enabling the student to begin studying advanced chapters in quantum Mechanics and other academic subjects that require the student to possess concepts and skills required by the study of quantum mechanics. 									
		9	. Teaching and Learning Strat	egies					
 Strategy Solved examples to enhance understanding. Discussion during lectures and during solved examples to consolidate concepts and enhance understanding. Students are assigned homework. Daily tests using oral questions and discussion to focus on students' acquisition of key concepts. Weekly assessment of acquired problem-solving skills (daily homework) Termly exams as a comprehensive assessment of students' understanding of concepts and their ability to find solutions.

1. Course Name:

Materials Physics II

2. Course Code:

3. Semester / Year:

Second/ 2025

4. Description Preparation Date:

27/1/2025

5. Available Attendance Forms:

Physical attendance

6. Number of Credit Hours (Total) / Number of Units (Total)

2 hours weekly (30 total)/ 2 units

7. Course administrator's name (mention all, if more than one name) Name: Assist. Prof. Dr. Sadeem Abbas Fadhil Email: sadeemfadhil@yahoo.com

8. Course Objectives

Course Objectives	• Understanding Physical Properties: Enabling students to understand the physical properties of different materials, such as density, hardness, and elasticity of metals, polymers, ceramics, and composite materials.
	• Applying Theoretical Concepts : Connecting theoretical concepts in physics to practical applications in everyday life and industry.
	• Developing Analytical Skills : Enhancing analytical and critical thinking skills through the study of material behavior under various conditions.
	• Encouraging Innovation: Inspiring students to innovate in the design and application of materials, supporting research and development in fields like engineering and materials science.
	• Understanding Chemical and Physical Changes: Studying how changes in environmental conditions affect the properties of materials.

• Interacting with Technology: Enhancing students' understanding of how modern technology is used in the study and application of materials science. 9. Teaching and Learning Strategies • Lectures and Interactive Discussions: Use lectures to introduce key concepts, followed Strategy by discussions to encourage student engagement and clarify doubts. • **Case Studies**: Analyze real-world applications and case studies to show how materials physics is applied in industry, engineering, and technology. • Group Projects: Encourage collaborative learning through group projects that focus on designing or testing new materials, fostering teamwork and problem-solving skills. • **Simulations and Modeling**: Computer simulations are used to visualize complex concepts and predict material behavior under different conditions. • Flipped Classroom: Assign readings or video lectures for students to review at home, freeing up class time for discussions, problem-solving, and hands-on activities. • Guest Lectures and Industry Visits: Invite professionals from the materials science field or organize visits to relevant industries to provide real-world insights. • **Problem-Based Learning**: Present students with real-life problems related to materials and encourage them to propose solutions based on their understanding of physics principles. • Peer Teaching: Allow students to teach certain topics to their peers, reinforcing their own understanding and enhancing communication skills. • Assessment and Feedback: Use varied assessment methods, including guizzes, lab reports, and presentations, to gauge understanding and provide timely feedback. 0. 1 st	2	 What students will learn in the lecture The syllabus outlines the topics the course will cover, helping students understand its scope. It clarifies the learning objectives and what they are expected to achieve by the end of the course. Assessment and Grading: Students will know how they will be evaluated (e.g., exams, problem sets, projects) and the weight of each component in their final grade. This transparency helps students plan their efforts 	Special Relativity Syllabus Structure		
2 nd	2	and prioritize their work. students will Understand: the concept of reference frames and their role in describing motion. Grasp the law of inertia and its implications for the behavior of objects.	 Concept of Reference Frames The Law of Inertia (Newton's First Law 	 Lecture-based learning. 	
3 rd	2	Students will learn Galilean and Newtonian laws governing motion, distinguish between inertial and non- inertial frames, and explore Galilean relativity and transformations. They will understand fictitious forces like the Coriolis force and see how classical mechanics' limitations lead to special relativity.	 Galilean and Newtonian Laws Distinction Between Inertial and Non-Inertial Reference Frames Assumptions of Galilean Relativity 	• Technology- based learning.	Quick test

4 th	2	Students will learn about the luminiferous ether , a hypothetical medium for light propagation, and how Maxwell's equations predicted a constant speed of light, conflicting with Galilean relativity. The Michelson- Morley experiment failed to detect the ether, showing light speed is invariant. This led Einstein to develop special relativity	 1. 2. 3. 4. 	Concept of the "Luminiferous ether Maxwell's Equations and the Conflict The Michelson- Morley Experiment How the Experiment Led to Special Relativity	0	Group learning.	
5 th	2	Students will learn that simultaneity is relative, and depends on the observer's motion. They will explore Einstein's postulates— the laws of physics are the same in all inertial frames, and the speed of light is constant— leading to time dilation, length contraction, They will understand the importance of relativity in modern physics, and use light cones in spacetime diagrams to visualize causality and the limits of communication.	 1. 2. 3. 4. 5. 	What is Simultaneity? The Terms Absolute and Relative Transition to Relativity: Einstein's Two Postulates of Special Relativity What is the Importance of Relativity? Light Cones in a 3D Diagram and Their Justifications	0	Individual learning	
6 th	2			Mid Exam 1			
7 th	2	Students will learn the main effects of Einstein's theories, including time dilation, where moving clocks run slower, and the twin paradox, which illustrates this effect. They will explore the light clock thought experiment to derive the time dilation formula and understand how it arises from the invariance of the speed of light.	 1. 2. 3. 4. 5. 6. 	Main Effects Einstein's Theories Time Dilation What is a Light Clock The Light Clock Thought Experiment Derivation of Time Dilation The Twin Paradox			

		simultaneity. These ideas challenge	Ladder Paradox
		These ideas challenge classical notions of space	4. What is the Ladder Paradox
		and are crucial for understanding relativistic effects.	
9 th	2	Students will understand the mathematical derivation of relativistic momentum. In addition, the student will be able to understand how momentum is conserved in relativity	1. Limitations of Newtonian of Momentum 0 2. Relativistic Momentum: 3. Derivation of Relativistic of Momentum 0
10 th	2	They will learn the definition of relativistic momentum and its dependence on the Lorentz factor. They will understand the mathematical derivation of relativistic momentum. They will understand how momentum is conserved in	 Relativistic Energy and Mass-Energy Equivalence Relativistic Kinetic Energy Derivation of Relativistic Energy Energy- Momentum Relation
11 th	2	relativity. Students will understand how relativity redefines momentum and energy. They will learn to solve problems related to high- speed motion and energy conversions. These concepts are fundamental to understanding particle accelerators, cosmic rays, and nuclear reactions. relativity unifies mass, energy, and momentum.	1. Applications of Relativistic Momentum and Energy • Particle Accelerators: • Relativistic Collisions: • Astrophysical Phenomena 2. Problem-Solving and Thought Experiments
		1	

13 th	2	Students will learn the relativistic Doppler effect, which describes how the frequency of light changes for moving observers, They will explore its applications in astronomy, such as redshift, Hubble's Law, and cosmic microwave background analysis. Through exercises, they will solve problems involving frequency shifts and velocities, applying these concepts to real-world astronomical observations. Students will review key	1. 2. 3.	Relativistic Doppler Effect Applications in astronomy and cosmology Exercises on the relativistic Doppler effect	
14 th	2	concepts and equations in special relativity, engage in group discussions to solve advanced problems, and demonstrate their understanding through a summative assessment (test or project presentation). The course concludes with a Q&A session to address final questions and reflect on the material, ensuring a comprehensive understanding of relativity and its applications.	1. 2. 3.	Comprehensive Review of Key Concepts and Equations Group discussions on advanced problems Question and Answer Session	
15 th	2	Students will learn the basics of general relativity, including gravity as spacetime curvature and gravitational time dilation. They will explore theoretical implications like the twin paradox and the impossibility of faster-than- light travel, and discuss philosophical insights on how relativity reshapes our understanding of space, time, and reality	1. 2. 3.	Introduction to general relativity (basic concepts). Discussion of gravitational time dilation and curvature of spacetime Theoretical implications: Twin paradox and faster-than-light travel.	

11. Course Evaluation

Distributing the score out of 100 according to the tasks assigned to the student such as daily preparation, daily oral, monthly, or written exams, reports etc.

- Performance Test (Home Work) (15%)

<u>First Course- Nuclear physics</u> -

Course description

This course explores elements of nuclear physics for physics students. It covers basic properties of the nucleus, a nuclear force, binding energy and nuclear stability, nuclear models "two types of models are emphasized: The liquid drop model and the shell model". It also covers, radioactive decays and nuclear radioactivity. The lecture course will be integrated with problem solving classes.

- Pro. Dr. Kareem Khalaf Mohammad (theoretical) .
 - ب. (Essam. mohamed Rasheed (practical)

2024-2025	Date this description was .8 prepared

Course objectives .9

The main objectives of this course is hopefully to be achieved in the following steps:

- An overview of the history of the physics of the nucleus.
- A review of elements of quantum mechanics necessary to understand nuclear physics.
- Introduction of the liquid drop model and shell model
- Applications to the study of natural radioactivity and nuclear reactions.

Learning outcomes and methods of teaching, learning and assessment .10

knowledge and understanding -^j

To provide students with an opportunity to develop knowledge and understanding of the key principles and applications of Nuclear Physics, and their relevance to current developments in physics.

ب - Subject-specific skills

Teaching and learning methods

- Theoretical lectures -
- Asking students a set of thinking questions during the lectures for specific .topics
 - .Giving students homework that requires finding self-solutions -Evaluation methods
 - aluation methods
 - daily tests -
 - Monthly exams -
 - Homework and student interaction in discussion sessions -

Thinking skills: Scientific problem solving skills-Giving students problems that need to be solved by referring to external references that can be found via the Internet

General and transferable skills (other skills related to employability and - .(personal development

Follow up on the scientific development of curricula for international universities via the Internet

On successful completion of the course students will be able to:

1. Have acquire knowledge and understanding about the electronic and nuclear structure of atoms.

2. Have solved problems related to the structure of atoms and the effect of ionizing radiation on the body and the environment.

3. Have an appreciation of the influence of atomic and nuclear physics on modern scientific development.

4. Have the foundations for examining in more detail various aspects of experimental and theoretical physics which relate to both atomic and nuclear physics.

5. Be able to explain the key areas in which Atomic and Nuclear Physics affects everyday living.

11. Course Evaluation

Course evaluation for a Laser Physics course typically includes a combination of assessments designed to gauge both theoretical understanding and practical skills. Students may be evaluated through written exams covering core laser concepts, quizzes on specific topics, and problem-solving assignments. Hands-on lab work plays a crucial role, where students are assessed based on their ability to conduct experiments, analyze data, and properly handle laser equipment. Additionally, project-based assessments and presentations allow students to demonstrate their understanding of laser applications in real-world scenarios. Participation in group projects and discussions also contributes to evaluating teamwork and communication skills.

Required Texts	Medical Physics by Hasan Maridi , 3 rd edition, 2020 Medical Physics Notes, 2023 https://www.tutorialsduniya.com/notes/medical-	
	physics-notes/	

1. Course Na	
Solid State	e Physics II
2. Course Co	ode:
PHYS420	2
3. Semester	/ Year:
2 nd course	e / 4 th year
4. Description	on Preparation Date:
1/9/2024	
5. Available	Attendance Forms:
In person	or Online
6. Number of	f Credit Hours (Total) / Number of Units (Total)
6 hours we	eekly (3 H theoretical + 3 H practical)
7. Course a	dministrator's name (mention all, if more than one name)
Name: Ass	st. Prof. Dr. Mohammed Tariq
Email: Mo	hammed.albaidhani@nahrainuniv.edu.iq
8. Course Ob	ojectives
Course Objectives	Teach the student the basic concepts of solid state physics.
	Providing the student with the skills to discuss and solve applied
	problems related to solid state physics.
	 Linking theoretical concepts with practical applications.
9. Teaching a	and Learning Strategies
Strategy	Discussing the topics of the methodological book and auxiliary references
	Theoretical lectures including problem solving and discussion of homework
	Asking students for a set of thinking questions during lectures on specific
	topics.
	Giving students homework that requires finding solutions on their own.

10. Course Structure

Week	Hours	Required Learning Outcomes	Unit or subject name	Learning method	Evaluation method
1	3	Learning	Summery for the first semester	Theoretical	Oral and written

2	3	Learning	Introduction to Diffraction X-ray, neutron, electron	Theoretical	Oral and written
3	3	Learning	Methods of diffraction Laue, Rotating method, Powder method	Theoretical	Oral and written
4	3	Learning	Bragg diffraction law	Theoretical	Oral and written
5	3	Learning	Calculation of hkl for cubic systems from XRD patters	Theoretical	Oral and written
6	3	Learning	Brillouin zone Bragg plane	Theoretical	Oral and written
7	3	Learning	Crystal Binding Ionic, electronegativity Covalent, Metallic, Van der Waals, Hydrogen bonds	Theoretical	Oral and written
8	3	Learning	Bulk modulus	Theoretical	Oral and written
9	3	Learning	Compressibility, ductility, malleability, hardness	Theoretical	Oral and written
10	3	Learning	Crystal imperfection (defects)	Theoretical	Oral and written
11	3	Learning	Defects classification All types of defects	Theoretical	Oral and written
12	3	Learning	Lattice vibration Diatomic lattice Acoustic and optic modes	Theoretical	Oral and written
13	3	Learning	Origin of optic and acoustic branches Displacement patterns	Theoretical	Oral and written
14	1	Learning	Test	Theoretical	Oral and written
15	3	Learning	Summary	Theoretical	Oral and written
16	3	exam	Final Examination	Theoretical	Oral and written

11. Course Evaluation

40 points (10 laboratory + 10 homework + 20 mid exam) 60 points (10 laboratory exam + 50 final exam)

12. Learning and Teaching ResourcesRequired textbooks (curricular books, if any)1. Introduction to Solid State Physics (Wiley,
Global Edition)By: Charles Kittel ISBN: 978-1-119-45620-9
(August 2018) (712 Pages).2. Introduction to Solid State Physics (Wiley,
India Edition)By: Charles Kittel ISBN-13: 978-8-126-57843-6
(2019) (712 Pages).

Main references (sources)	Solid State Physics (Revised Edition, Cengage Learning Asia Pte Ltd) By: Neil W. Ashcroft ISBN-13: 978-981- 4369-89-3 (2016) (1294 Pages).

1. Course Name:

Healthy Physics

- 2. Course Code:
- 3. Semester / Year:

 $2\ 4^{th}$

4. Description Preparation Date:

2025

- 5. Available Attendance Forms:
 - Traditional attendance and electronic attendance
- 6. Number of Credit Hours (Total) / Number of Units (Total)
 2\2
- 7. Course administrator's name (mention all, if more than one name) Name: Dr. Asmaa Hadi Mohammed Email: asmaa.hadi@nahrainuniv.edu.iq
- 8. Course Objectives

Course Objectives	1. Understanding the Fundamentals of Radiation			
	Study different types of ionizing and non-ionizing radiation and their			
	effects on living matter.			
	Identify natural and artificial sources of radiation.			
	2. Interaction of Radiation with Living Tissues			
	Analyze the effects of radiation on cells and tissues.			
	Understand mechanisms of radiation damage and cellular repair.			
	3. Radiation Protection			
	Apply radiation safety standards in medical and industrial			
	environments.			
	Learn methods to minimize radiation exposure and protect workers			
	and the public.			
	4. Medical Applications of Radiation			
	Explore the use of X-rays and nuclear medicine in diagnosis and			
	treatment.			
	Understand the principles of radiation therapy for cancer treatment.			
	5. Radiation Measurement and Monitoring			
	Learn about devices used for radiation dose measurement.			
	Apply techniques for environmental and radiation monitoring.			

9. Teaching an	d Learning Strategies
Strategy	1. Deep Understanding Approach
	Connecting physics concepts to health and medical applications, such as
	understanding radiation effects on living tissues.
	Using real-world examples to illustrate the role of physics in healthcare.
	2. Active and Interactive Learning
	Group discussions: Engaging in conversations about radiation safety.
	3. Utilizing Modern Technology
	Using interactive presentations and 3D visualizations to explain radiation
	interactions with the human body.
	4. Collaborative Learning
	Forming team-based studies on topics like radiation detection devices or X-ray
	imaging techniques.
	5. Continuous Assessment
	Conducting regular quizzes that include analytical and application-based
	questions.
	Assigning students to deliver short presentations explaining specific topics in a
	simplified manner.

Name	se administrator's name (mention all, if more than one name) e: Dr. Narjis Zamil Abdulzahra, Zeinah Kumail Abdaldeen l: Narjis .Zamil@nahrainuniv.edu.iq
8. Cours	se Objectives
Course Object	 Develop an advanced understanding of laser physics and its applications. Explore different types of lasers and their operational principles. Analyze the interaction of laser beams with matter and its applications. Understand laser stability, modes, and amplification processes. Apply laser technologies in industrial, medical, and scientific fields.
9. Teach	ning and Learning Strategies
Strategy	 Theoretical lectures covering advanced laser concepts. Problem-solving sessions and discussions on assignments and research. Laboratory experiments to demonstrate laser principles. Research projects and reports on recent developments in laser
	technology.
10. Course	

Week	Hours	Required	Unit or subject	Learning method	Evaluation
		Learning	name		method
		Outcomes			
1.	3	Understanding laser beam properties	Beam Quality, Divergence, and Gaussian Beams	Lecture	Assignments Exams
2.	3	Studying laser modulation and Q- switching	Q-Switching and Mod Locking	Lecture	Reports & Exam
3.	3	Exploring nonlinear optical effects	Frequency Doubling, Mixing, and Harmonic	Lecture Problem-Solvi	Homework Quizzes
4.	3	Investigating laser pulse generation	Pulsed Laser Operation and Techniques	Lecture	Reports & Exam
5.	3	Laser material processing	Laser material processing	Lecture	Assignments Exams
6.	3	Understanding laser-material interactions	Laser Welding	Lecture	Lab Reports Quizzes
7.	3	Understanding laser-material interactions	Laser dilling	Lecture Discussion	Reports & Exam
8.	3	Understanding laser-material interactions	Laser Cutting	Lecture	Homework Reports
9.	3	Understanding laser-material interactions	Laser Engraving	Lecture Research Presentations	Lab Reports Exams
10.	3	Exploring medical laser applications	Lasers in Surgery, Dentistry, and Ophthalmology	Lecture & C Studies	Practical Demonstration Reports
11.	3	Understanding laser safety regulations	Eye Safety, Power Control, and Hazards	Lecture Discussion	Research Repor Exams
12.	3		Fiber Lasers and Optic: Fiber Systems	Lecture & C Studies	Assignments Exams
13.	3	Exploring cutting- edge laser technologies	Ultrafast Lasers, Free Electron Lasers, and Future Trends	Lecture Discussion	Lab Reports Quizzes
14.	3			Lecture & C Studies	Research Paper Oral Exam
15.	8	Final project presentations	Student Research Projects on Laser Applications	Lecture Discussion	Final Evaluation Grading

11. Course Evaluation

Distributing the score out of 100 according to the tasks assigned to the student such as daily preparation, daily oral, monthly, or written exams, reports etc

Course Description Form							
1. Course Name:							
Solar Physics	Physics						
2. Course Code:	2. Course Code:						
PHYS425							
3. Semester / Year:							
Fourth/2 nd sem. 2024-2025							
4. Description Preparation Date:							
1/2/2025							
5. Available Attendance Forms:							
Physical attendance							
6. Number of Credit Hours (Total) / Nur	nber of Units (Total)						
2 Hours/2 Units							
7. Course administrator's name (mer Name: Assis, Prof. Dr. Jazeel Hussein Aze							
	ez						
	Email: Jazeel.azeez@nahrainuniv.edu.iq						
8. Course Objectives							
	and study the laws that govern this science.						
Objectives 2. Understanding the structure and	composition of the Sun's interior, including its core,						
radiative zone, and convective zone	·-						
3. Studying the Sun's atmosphere,	including its layers such as the photosphere,						
chromosphere, and corona.							
4. Understanding solar phenomena	such as sunspots, solar flares, coronal mass ejections						
(CMEs), and solar prominences.							
5. Explaining observational technique	ues and instruments used in solar physics,						
including telescopes, and space-ba	ased observatories.						
9. Teaching and Learning Strategies							
Strategy 1. Ask direct oral questions.							
2. Scientific reports and daily assignment	its.						
3. Short daily quizzes.							
4. Give various problems at the end of e	each chapter to guide the student to the correct scientific						
solution.							
5. Monthly exams with various questions	and multiple choices.						
6. Final exams.							
	L						

Week	Hours	Required Learning	Unit or subject name	Learning	Evaluation
		Outcomes		method	method
1	2	Students have general	Introduction	Whiteboard	Oral and
