

- 1- The structure of cells

- 1-1 introduction
- 1-2 the chemical elements of life
- 1-3 the type of cell
- 1-4 cell structure and function
- 1-5 cellular membranes

2-carbohydrate

- 2-1 the importance of carbohydrates
- 2-2 classification of carbohydrates
- 2-3 monosaccharaides and the optical activity
- 2-4 aldoses and ketoses
- 2-5 Fischer's projections
- 2-6 Haworth's projection and cyclic sugar
- 2-7 function of monosaccharaides
- 2-8 glycosides formation
- 2-9 monosaccharaides reaction
- 2-10 amino sugars and sugar's derivatives
- 2-11 oligosaccharides
- 2-12 polysaccharides
- 2-13 glycoproteins and glycolipids

3-amino acids and peptides

- 3-1 the classification of amino acids
- 3-2 the chemical and physical properties of amino acids
- 3-3 peptide structure
- 3-4 non-essential amino acids
- 3-5 ionization reaction of amino acids
- 3-6 separation and identification of amino acids
- 3-7 chemical reaction of amino acids

4-proteins

- 4-1 protein functions

- 4-2 classification of proteins
- 4-3 levels of proteins
- 4-4 primary structure
- 4-5 secondary structure
- 4-6 tertiary structure
- 4-7 quaternary structure
- 4-5 denaturation and renaturation
- 4-6 identification of protein
